Enterprise SIP Trunking

Integrate voice, video & data onto a single network.

High Quality, Reliable Cloud-Based Enterprise Voice

Whether you are transitioning from TDM to VoIP or simply want to cut costs, TouchTone enterprise SIP not only provides significant cost savings and simplifies IT management, but offers failproof backup and disaster recovery to ensure that your business is running 24/7/365.

Easy Setup and Centralized Management - Use Existing Phones
SIP connects to your existing PBX/IP PBX phone system and simply requires a reliable internet connection.

Bring Your Own Bandwidth or Bundle
Bring your own bandwidth or bundle your service for a fully integrated voice and data solution - multi-carrier T1, MPLS, and Ethernet providers available.

Cut Overall Costs
SIP combines voice and data on a single network and dynamically shares call capacity across the entire enterprise, including multiple locations. Calls are routed through the Internet rather than the PSTN, eliminating the need for costly dedicated voice T-1/PRI circuits and the expensive telecom services that go along with them. Set up what you need today, then expand as your business grows. Choose from unlimited calling or metered pay-per-minute plans.

Benefits

High Quality Voice

Quality of Service (QoS) SLAs with voice prioritization ensures overall optimal performance and delivers clear, reliable voice all while maximizing bandwidth.

On-Demand Scalability

Buy only the trunks you need. Quickly and easily add/remove phone lines, connect new/multiple locations, and increase calling capacity.

Disaster Recovery

Tier 1 multi-carrier network diversity and geographic redundancy ensures that your business is running 24/7/365. Calls are automatically rerouted in the event of power or internet outage.

Additional Features

Supports Microsoft Teams
TouchTone SIP supports Microsoft Teams Direct Routing. Keep existing phones. No hardware or software to install. Set up in minutes.

DIDs and Number Portability
Transfer your phone numbers from another carrier to Touch-Tone, or choose local/enhanced DID numbers in over 26 countries.

Toll Free Numbers
Inbound-only toll-free service for 800, 844, 855, 866, 877, and 888 numbers, including vanity numbers.

Manage Calls via the Web-Based Portal
Easily change routing strategies and call flows. Control inbound toll free and DID routing between multiple sites, IP connections/PRI interfaces or Remote Call Forwarding.

**Professional Installation**
TouchTone offers customers professional nationwide SIP trunk installation services to ensure that all phases of implementation are done quickly, efficiently, and without disturbing normal business operations.

Managed Router
Improve and streamline how your network operates. A Touch-Tone managed router provides a complete end-to-end solution including installation, configuration, and monitoring.

In-House 24/7 Support
With in-house, U.S.-based provisioning, engineering, customer service and 24/7 Network Operations Center, you can depend on TouchTone for first-class support.
