

TouchTone Collaborator Mobile App – iOS Devices

You can use TouchTone Collaborator on your Android and iOS devices. It works similarly to the desktop version.

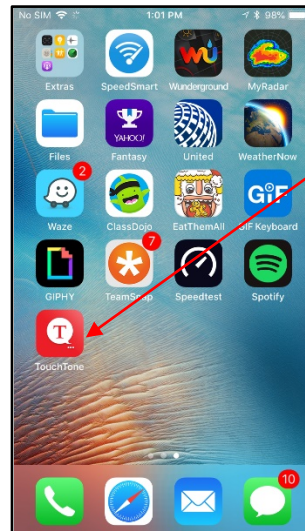

For more information, including available features, please refer to the [TouchTone Collaborator User Guide](#).

Getting Started

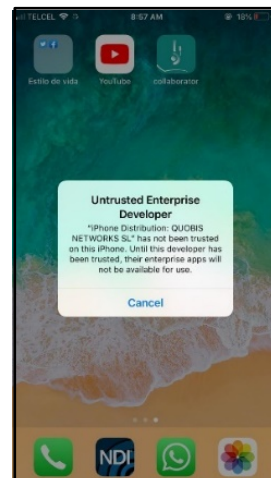

Download and install the TouchTone Collaborator mobile app by visiting <https://mycollaborator.touchtone.net/mobileapps/>.

Click on the iOS icon to initiate the download of your mobile app.

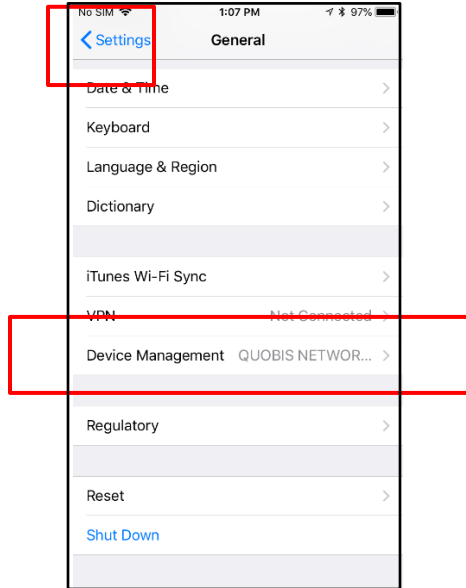

1. The TouchTone Collaborator app will now be loaded onto your iPhone Home Screen and App Library.

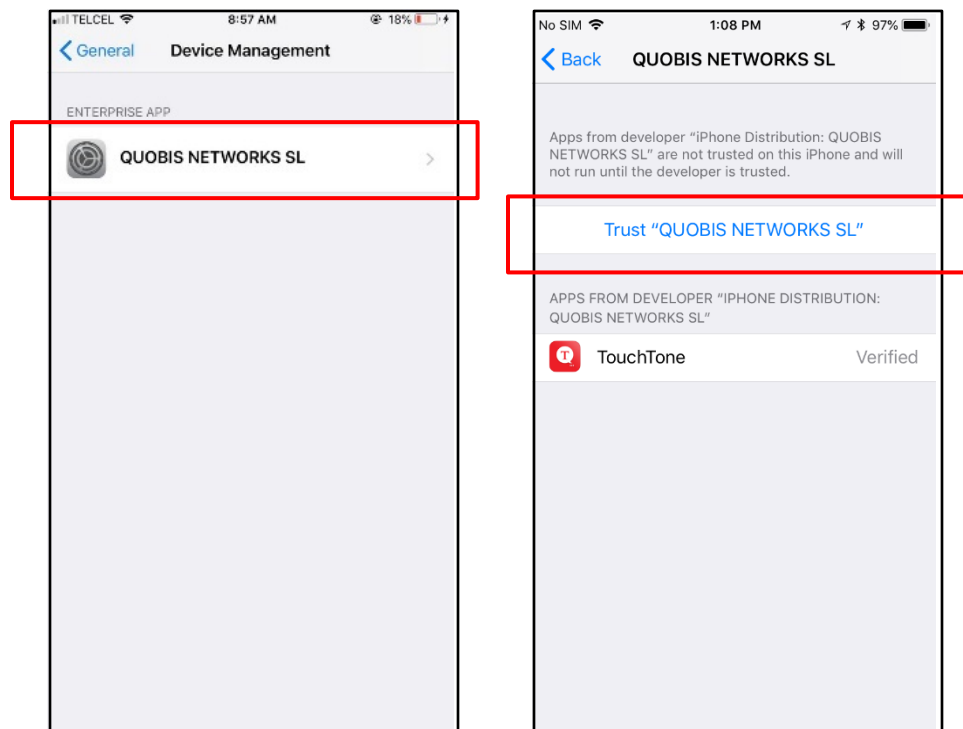

2. You may or may not be notified that the developer is not yet trusted. If you are, you will need to go to your **General Settings** and give the app Trust permissions.

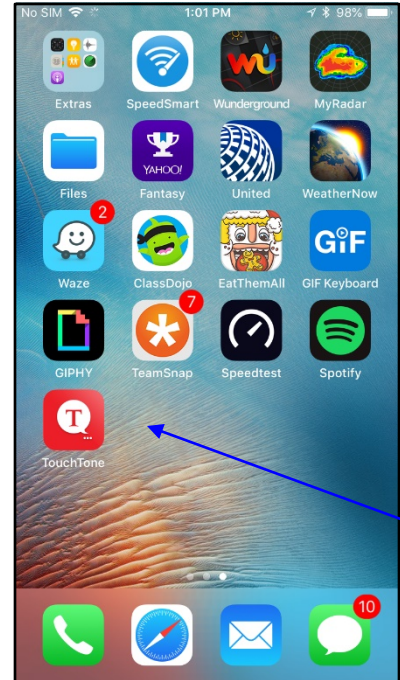

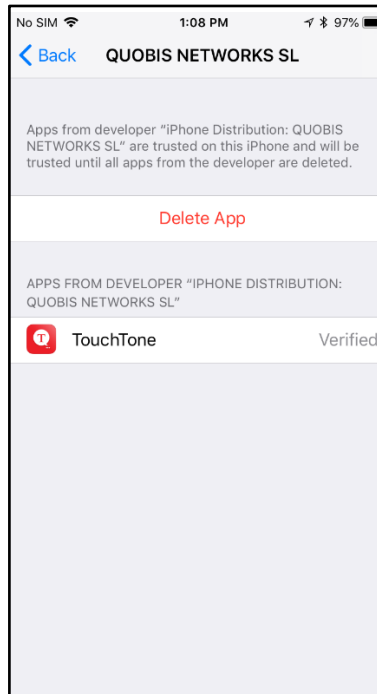

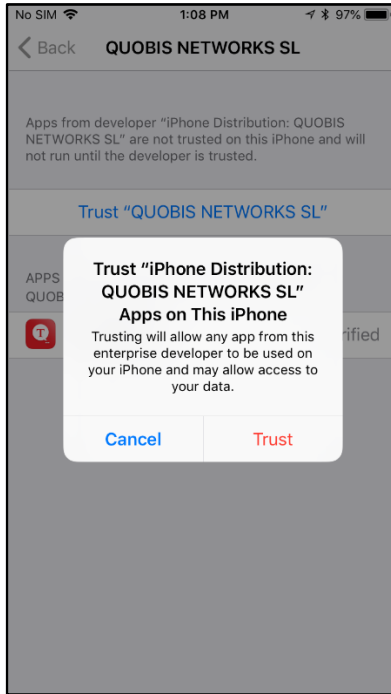

3. To do this, select the **Settings** icon and go to your **General Settings** and select **Device Management**.

4. From here, you will click on **QUOBIS NETWORKS SL**. Then click on **Trust "QUOBIS NETWORKS SL"**.

5. Here you will be prompted to trust the app. Click the **Trust** button.
6. You will now see that the Collaborator app has been verified.
7. Press your **Home Button** and go back to click on you **TouchTone Collaborator App**.

8. Click **Allow** for "TouchTone Would Like to Send You Notifications."
9. Once you do, you will be prompted to input the username and password you were given.
 - Select the appropriate language and click the **Log In** button.
